

Chitra K. Vishwanath

ARCHITECT

TO WHOMSOEVER IT MAY CONCERN :

I, Chitra K Vishwanath , architect, would like to wholeheartedly recommend the use of products from the OSOLIN RESEARCH LABORATORY, Bangalore .

I specialise in building with environmentally friendly and natural materials. Most of my buildings are built with mud and wood.

In all cases for the past fifteen years of my practise I have used products from OSOLIN RESEARCH LABORATORY for termite treatment of wood, soil and also as insecticides.

In India the other products which are available for this purpose are highly polluting and I do not recommend them for my buildings.

I have also recommended the use of these products even for old wooden structure in Kerala, India where the roof rafters were affected by termites. The product performed admirably and clients are very satisfied with the result. Similarly, in a project in Manipal, India these products have been used extensively for renovation purpose. The clients are also very happy with the same.

Again, I would firmly reiterate that these products are excellent value for money besides being beneficial to the environment.

Regards,

Chitra K. Vishwanath
